- Sign Up
- Login View
- Create New Issue
- Issue Descriptive View
- Dashboard
- Search View
- My Issue List

- Sign Up
  Description: In this view we have below fields
    1. Name – Required Field
    2. Email – Required Field and should follow email format
    3. Password – Required Field and Password and Confirm password should be same
    4. Confirm Password- Required Field and Password and Confirm password should be same

   5. Profile Picture- Required Field And only upload png and jpg file

- Login View

  Description: In this view we can login using-

  Login with Username and Password

  Login with Gmail

- Dashboard
  Description: Dashboard contains a "**create new issue"** button which will redirect user to create view to enter new issue.
  And Dashboard contains a tabular view of issues assigned to login user

 I have give search on the same page which will filter result in the table there.

  Table has following features-
  Searching on Title and Status
  Sorting on columns title, date and status
  Pagination, User can custom page length from [10, 25, 50, 100]
  And a view link on each row to redirect user to current issue's descriptive view.

- Create New Issue
  Description: View to enter new issue in the Application. All fields are required to filled, Form contains tiny cloud editor to enter descriptions.
  By default, issue status will be In-Progress. So there is no input for this
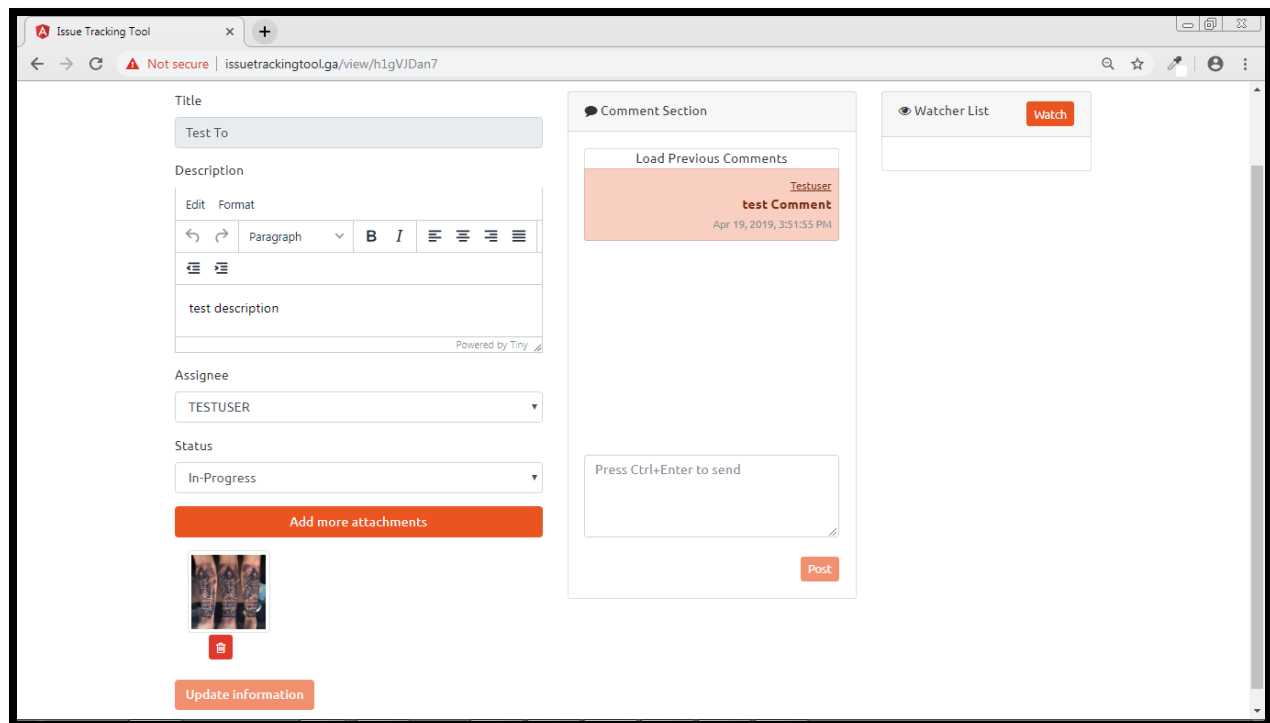

- Issue Descriptive View
  Description: In this view we can see all the details related to issue. and any user can comment and attach files related to the issue. And any user can add himself/herself as a watcher to the issue, so that further he/she will get notification of any changes in the issue.
  It contains comment section where any user can post a comment. Comment list is paginated, & on view load only last 10 comments will be shown and user can press **"Load Previous Comments"** button to load previous 10 comments. The current user's comments will be right aligned and with different background color.

  It also contains watcher list section which shows list of users who has assigned themselves as watcher of the issues. And there is a "**Watch Button"** which is visible to the current user only if they aren't in current watcher list, so that they can add themselves as watcher of the issue.

  Current user can edit the issue following fields -
  1. Description
  2. Assignee- Current user can change the current assignee
  3. Status-Current user can change status
  4. Attachment-Current user can delete older attachments and upload new attachments. For adding more attachment I have used ng 2 file upload.

- Search View

  Description: Search View contains a tabular view of all the issues entered in the system
  Table has following features-
  Searching on Title and Status
  Sorting on columns title, date and status
  Pagination, User can custom page length from [10, 25, 50, 100]
  And a view link on each row to redirect user to current issue's descriptive view.

- My Issue List
  Description: My Issue View contains a tabular view of issues created by login user.
  Table has following features-
  Searching on Title and Status
  Sorting on columns title, date and status
  Pagination, User can custom page length from [10, 25, 50, 100]
  And a view link on each row to redirect user to current issue's descriptive view.
